Allowable Subject Matter

Claims 1, 2, 7, and 11-19 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art fails to show or fairly suggest the claimed structures for extracting electrical energy from mechanical motion which is accomplished by employing a plate with a waved surface sandwiched between two transducers wherein rotation occurs between the between the plate and the transducers such that the transducers bend out-of-phase and provide energy to a rectifying circuit. Alternatively, a structure where the transducer is located between upper and lower plates and between each of these plates and the transducer are bearings wherein relative motion of the transducer with the upper and lower plates causes charges to be generated, which are then further rectified, is neither taught, shown nor suggested by the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
